

Acoustic Wall Panels

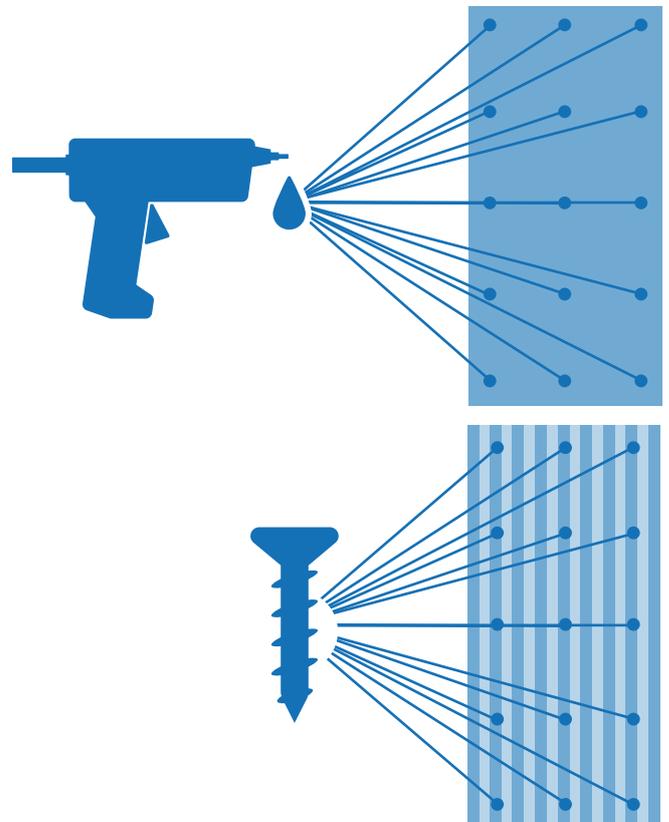

You need:

Glue and glue gun
Spirit level
Pencil
Cordless screwdriver
Screws

1 Choose the direction in which you want to lay your acoustic panels. After measuring, you can the panels can be shortened at the back with a fine-toothed jigsaw or hand saw.

2 The acoustic panels are glued or screwed to the wall to the wall. For each panel, at least 15 screws at a maximum distance of 60 cm are required for each panel.

When the acoustic panels are fixed to the ceiling, screws must always be used.
